- When I'm not coding, spend time with my family, traveling or going outdoors (cycling, hiking or simply anywhere in nature!)

{ Skills }

Web Technologies & Languages

HTML, CSS, Javascript, ReactJS, Ruby, Ionic framework, PouchDB, Kajabi

Backend technologies

NodeJS, SQL Server, CouchDB, MongoDB

{ Freelancing Projects }

Impulsa ToGo App and Website
October 2021 - October 2022

Impulsa Asesores ([here](#) to read more) is an Insurance and Securities Broker Company. Built a mobile app for their new digital channel to enable their individual and enterprise customers to access financial products and services. This project also included a fresh redesigned and construction of their website (see [here](#))

Conserva Mobile App
December 2022 - June 2023

A mobile app for field officers (Android only). Build a tool to enable staff to gather customer and loan application data, allowing track of customer personal information, home and business address, socioeconomic data, guarantees and personal references, guarantors, beneficiaries, capturing photos, etc. This app also uses external services for Identity validation (Veridoc ID) and provides Proof of Life for customers onboarding process.

This project also included an API REST for an Express.JS server to render PDFs for account statements, barcodes for payment references and more. Implemented Puppeteer npm package and Handlebars template Engine.

Reimagine Conservation
September - October 2022

A web application that I developed for Zamia Media (zamia.media) related to the [UICN](#) program. Reimage Conservation is a fundraising campaign to promote the values of nature conservation projects around the world. The website was multilanguage: English, Spanish and French, and included live reporting, a dynamically generated word cloud, video slider, firebase authentication and registration form for visitors and interested people. Find the live website [here](#).

Small startup website
Chiquitito Detalles
January - February 2021

ChiquititoDetalles, a basic ecommerce online store for ecological products sold locally. The most relevant features were to integrate facebook login for easier registration and paypal for checkout. The stack used was: ReactJS for front-end, Firebase Realtime database and Facebook Api.

{ Experience }

CTO at CONSERVA (microfinance company, Mexico)
October 2012 - 2020

As a developer, my first job was to build new features for financial regulations, design and build reporting for credit portfolio monitoring (using Crystal Reports tools). Thereafter and as assumed the CTO position, was able to implement the digital transformation strategy of the company: build an entire software development team, convert the data center to Cloud and carry out a market study for core banking software providers in Latam.

Freelance IT Consultant
2004 - 2008

Worked for three companies: Triple Jump Advisory Services (from Netherlands), Fern Software (from Northern Ireland) and Microservice Consult (from Germany). Not assigned any developer tasks for those positions, but had the chance to experience a diverse number of financial institutions in many countries.
